## PUBLISHERS' NOTE

The present publication brings out the substance of the three lectures delivered by Swami Krishnananda at the University of Allahabad, on an invitation received from the hon'ble Vice-Chancellor, requiring that the students be addressed on the essentials of culture and a life of knowledge. These discourses were given on the 7th, 8th and 9th of November, 1960, and they cover the foundation of Indian Philosophy and a practical application of it in one's daily life. The Appendices provide a statement on the leading points in the technique of living an *Integral Life*, and an effective method that could be implemented in the *Educational Process*.

It is the fond hope of the Swamiji that this unique example set forth by the Allahabad University in feeling the necessity to work for rousing in the minds of students a consciousness of the Higher Life be emulated by the other Universities also. Knowledge is not mere accumulation of facts, and is meaningless if it is divested of that light which illumines the basic demands of human nature. Education and culture make the true Man, and towards this end are the efforts through this publication directed.

## PREFACE

What man needs is not philosophy or religion in the academic or formalistic sense of the term, but ability to think rightly. The malady of the age is not absence of philosophy or even irreligion but wrong thinking and a vanity which passes for knowledge. Though it is difficult to define right thinking, it cannot be denied that it is the goal of the aspirations of everyone. It is not that anyone would deliberately wish to think wrongly, and wrong thinking is that attitude of the mind, where the false is mistaken for the true. This is a deep-rooted prejudice which it is hard for most people to eradicate. Error has become so much a part of man's thinking that there seems to be no one in a position to point it out. One cannot, at the same time, be a judge and also a party summoned for examination. It is necessary that some effort has to be put forth in tackling the problem in its core.

There is often a complaint that today the world has lost all philosophical or religious consciousness and that there is no receptivity to higher values. In this connection it is always forgotten that the higher values do not suddenly fall from the skies and they have to be inculcated into the mind with some care. It is impossible that consciousness can reject truth, for the two are inseparably related to each other, and, in their highest states, the two are one. What is need-

It is my intention to present to modern students certain broad outlines of the fundamental principles that can pave the way for world-understanding and conduce not only to social prosperity but also personal solace and real freedom which everyone seeks. I have attempted to lay in this book the foundations of that impersonal meaning on which the personal forms of philosophy and religion are constructed. I shall regard myself as amply rewarded if the student-world finds here profound suggestions for deep thinking and research.

Sivanandanagar,  
1st March, 1968.

## I

The supremacy of the Absolute, and the brotherhood of man, the blessedness of peace and goodwill, and the paramountcy of love and unselfishness have been the central teaching of all saints, prophets, philosophers, the noble minds and the great hearts of all nations, at all times. The glorious message of love and selflessness should be proclaimed to every home and to every heart.

In this age of atomic armament, racial hatred and policies of national greed, organised exploitation, international exclusiveness, intolerance and distrust, our task is not so much the alteration and transformation of the patterns, policies and plans of the governments of the nations of the world, as the creation of a great world-enveloping movement for a mass spiritual education and for the purification and the transfiguration of the nature and the personal propensities of the individual. The necessity for the

moral, ethical and cultural refinement of the individual upon a world-wide scale is to be realised first and foremost. For, the prime and fundamental unit of all wider groups like class, race, nation and human society, the world over, is the Individual, Man.

Great masses of mankind have to be weaned from the unfortunate hedonistic and *individualistic* tendencies of thinking and feeling, and acting with the grossness and greed of the mere beast. This is not an impossible proposition, for a perfection that is not seen by the mortal eye exists in all beings, and it is the essence of every individual consciousness. The method to draw it out is right and true education. This task of gradually, yet surely, regenerating the nature of the masses has to be seriously undertaken in all earnestness and worked out in the educational and the domestic spheres, in particular, and the wider social sphere, in general,—if the hope of creating a new generation and bringing into existence a new humanity which will elect and manage the future governments of nations in the best interests of all, is to be fulfilled.

I know this is a difficult task, but no great thing is ever done as if by magic. All constructivity implies hard work, and more so does a creative and constructive task of a world-wide nature. The results may not be immediate. To a large extent the fruit of such work will be for the posterity, while the tempo and the sincerity of the movement will set the elders athinking and gradually transform them as well. Just as a farmer who wishes to reap

a rich harvest of healthy and luxuriant crop does not so much attempt to change and improve the existing crop that is already standing in the field—though he exerts to safeguard them from rot and pestilence—but rather starts to treat the soil in which the seeds of the next harvest are lying and germinating in silence, even so, all those who are to work for future peace and universal well-being should first of all strive to create a right and ideal condition that will ensure the freedom necessary to enable the future generation to fulfil the hopes and ideals that we cherish today. If the world is to have peace, there has to be less of hypocrisy, less of prejudice and fear-complex, less of slavery to outdated traditions and exclusive material values. Above all, the ideal of righteousness to live and to let live and to consider the other man's rights, necessities and self-respect as much as our own, should have to be realised first.

Man should cultivate unlimited love. Patriotism, love of one's nation, one's own race, one's own religion, should never be allowed to be factors encouraging disunity, discord, hostility and superiority-complex. The love of your country and personal freedom should all the more emphasise the same in the other country and the other person. True religion is *Love*. True religion unites all in fellowship. Sages call upon man to see good in all, but our endeavour should be to see God in all, the stupendous Eternity in us, for only then will we be able to see the good in all. Let man be taught truth, purity, love, contentment and selflessness. Let there be a living faith in the

pervading goodness in the hearts of men, for this is the very essence of the spirit of true religion. In this faith, alone, lies the hope of our victory. Having achieved this, the main task is all but over, and such humanity in whose bosom the divine flame has been kindled up will spontaneously direct all endeavours towards the materialisation of these sublime ideals.

May the world be free from the fear of war and destruction, from the delusion of fostering civilisation through enslavement, from the self-righteous pride of charity and of doing good to others, from ungodliness and the unhealthy dialectics of materialism. May Peace be unto all beings.

## II

The vital need of the hour is the real education of students, who are the worthy future citizens, who are the hope and glory of the country, who shall be the physicians to minister to the sore heart of the nation, who shall be masters of themselves and shall sow the seeds of peace and abundance, harmony and happiness, unity and brotherhood everywhere. Education has been well said to be the process of the finding of the divine perfection which is already in man. It is meant to gradually universalise the self, not to thicken egotism and self-consciousness. The ideal of education is an integral development of the multiple facets of human life. It has to prepare the students for perfection in every walk of living. The purpose of true education should be to enlighten humanity, to destroy the lower nature in man, to better the social order, to promote human well-being

by training the students both for external achievement and for internal attainment. The consummation and test of true education is to be found in an all-round development of the faculties of knowledge, of love and of service.

It is only students who have disciplined their lives in academical centres, who have cultivated gentleness of spirit, acquired strength and fineness of character, and who dedicate their lives to the cause of unearthing the eternal verities that can achieve the ideal of brotherhood, peace and harmony that is being aspired for. It is only students whom the universities have equipped with a knowledge of the method of unfolding their intrinsic abilities in the physical, mental and spiritual fields through a scientific scheme of the right kind of education, that will be able to build a mighty nation and accelerate the spiritual evolution of humanity as a whole.

Educational centres should not impart mere vocational and technological education, but must provide means for an all-round, harmonious development of the entire personality. The schools, colleges and universities should, besides turning students into leaders and statesmen, scientists and scholars, soldiers, politicians and adepts in the various walks of life, transform them into sages, philosophers and seers. A thorough change in the present-day curriculum of educational institutions is the utmost necessity. Books that are best calculated to furnish the students with lessons on sweetness of deportment, spirit of sacrifice, control of self, purity of heart and

integrity of nature should be prescribed and made available. The making of man into a perfect, integrated being and really enlightening education are not two different things; indeed, they are inseparable. The objective should be not merely a training of the intellect, but an illumination of the very being and stuff of the individual. May the student population be exalted in moral excellence, truth and purity, learning and wisdom, culture and religion, the spirit of service and self-abnegation, strength of character and will.

At the University of Allahabad

## THE GOAL OF LIFE

### WHAT IS TRUTH?

We say we live in a world, because we perceive and experience certain phenomena which impinge on our senses and make us feel that we are in an objective environment. This supposed environment in which we appear to be placed is felt by us to be a complex situation that influences not only our individual personalities but also other individuals whose existence we observe intuitionally, as it were. We are aware, by analysis, experiment and observation, that broadly speaking, we have three avenues of knowledge, two of which are in direct relation to our normal world-experience, and one is unknown to most of us. These channels of perception are sense, reason and intuition.

Sense-perception reveals to us that we are in a world from which we are cut off as knowing subjects. The world, again, is separated from us as a non-intelligent principle placed in the context of an object which is differentiated from the knowing subject in that the latter is endowed with a principle

which we call intelligence, while the former is apparently bereft of it. And how do we perceive the world through our senses?

Any cautious intellect will be able to understand that the special feature that we observe as characterising anything in the world is change. Change appears to be the order of things. Everything moves, flows, is in a state of becoming. We have never seen, nor have we any chance of seeing, anything in this world, that is not subject to some kind of transformation or the other. Even our bodies, our senses, nay, even our own minds exhibit this subjection to the inexorable law of change. In short, we are in a process, not being.

And how do we know that there is change? The obvious answer would be that we see it. But here we have to raise a question, as rational beings who will not be easily satisfied by a dogmatic statement that there is change just because we see it. A truly great person is he who has the patience and the ability to first investigate himself, his powers of knowledge and his fitness for judging the nature of things. Are we correct in assessing the value of the phenomena that we observe through our senses? What is the standard of correctness? When we say that everything in the world changes, do we also include ourselves in all that changes? Now, just imagine: can we know that something changes or is in a state of transformation, if we ourselves are a part of this observed flux? Can there be knowledge of change if the knower himself changes with the change? The

fact that it is possible for us to recognise such a thing as movement or process shows that we somehow find ourselves standing as witnesses of what we observe. For the observer himself cannot be observed, and change itself cannot be its own knower. We say that a river flows, because the bed of the river itself does not flow, and we do not flow with the waters but stand as witnesses on the bank. This is an observation easy of understanding, that we cannot know the distinction between one part of a process and another unless we, as observing intelligences, are able to bring together the two distinguished parts by a link of understanding or consciousness which cannot belong to any one of the parts, and which, yet, has to be equally present to both the parts. The knower is different from the known.

Extending this observation to the entire world of perception, we come to the conclusion that, if at all it should be possible for us to know any such thing as a world,—its contents and diversities,—we have to accept, by implication, that our consciousness should be at least as wide as what we know, and this consciousness cannot be subject to separation or isolation as the perceptible objects are. Here we come to the crux of philosophy, the pivot of true scientific thinking. Are we in a world of truth?

And what is truth? A great philosopher-saint of ancient India, Swami Vidyaranya, has observed in his great work, the Panchadasi: *Satyatvam Badhahityam*—Truth is that which stands the test of the principle of non-contradiction. What is never seen

to change at any time, what is not subject to transcendence by any kind of experience, what is not dependent on anything else, what is its own proof and requires no other proof to establish its existence, is truth. Truth is that which is absolutely necessary to account for our experiences in life, and which, when negated or abrogated, contradicts all experience, and cuts the ground from under our feet. Truth is the ultimate Reality of the universe, internal as well as external,—gross, subtle and causal.

#### MODERN SCIENCE: ITS IMPLICATION

As students of modern science, and as enlightened persons interested in studying the advances of present-day researches in the realm of physics, you would be acquainted with the fact that science today has surpassed the old view that the world is made up of crass material stuff, or that it is really diversified in the manner we ordinarily see with our senses. Once upon a time we were told that the constituents of the physical world could be reduced to less than a hundred ultimate principles,—call them chemical substances. Later came the discovery that these substances are not really ultimate but could be reduced to minuter elements called atoms which were supposed to differ from one another in certain specific characters they possessed. But research did not end here. Today we are said to be placed in a mysterious universe of forces, of electrical charges, of dynamic powers which are discovered to be the essence of even the atoms. Even the pluralistic

notions involved at the present moment in the concept of the stuff of which the atoms are made are slowly getting narrowed down to the recognition of an immanent energy which is supposed to be the matrix of all things, the essence of the world, of our own bodies. We are in a world of energy, in which there cannot be any further differentiation, and which is not merely the cause of the substances of the world but is itself the real substances. We are told that this energy is called light when it has an impact on the retina of our eyes, is called sound when it impinges on the eardrum, is itself taste, touch and smell in accordance with the senses by which we come to feel its presence. It looks, of course, a wonder that we assert our own segregated bodily existences, with their passions and prejudices, while intellectually we are made to conclude that even our bodies are in essence parts of the cosmos of forces. And if we have to believe in what we understand to be the truth, we have no right even to think as individual personalities. We are the cosmos!

Well, let us agree that we are in a universe of energy, as the latest developments in modern physics would indicate. But what is the nature of this energy? What is it made of, and what do we mean by energy? Is it a quantitative substance, an object with dimension, and has it any quality, without which we can know nothing at all? You know, we usually say that something is seen because we observe a quality in it, a character which enables us to differentiate it from another. Has the cosmic energy

of the scientist any such perceivable quality? If it has either a quantity or a quality it should be a material substance, and has to be known by something other than itself, viz., an illuminating intelligence.

Here it will not be out of place if I make a reference to a habit that is prevalent among many, which makes out that even intelligence is an off-shoot of matter. Now, such a contention really defeats itself, because it involves a self-contradiction. Is matter identical with or different from intelligence? If it is one with intelligence, then what prevents us from assuming that there is only intelligence and no such thing as matter devoid of it, especially as it is very clear that we cannot even assert the existence of matter without an intelligent mind? On the other hand, if matter is different from intelligence, what is it that distinguishes matter from intelligence? Is this differentiating principle matter itself; or is it intelligence? For, there cannot be a third thing. If the difference is matter, then we have to find out the difference between this first difference and intelligence, which argument would lead to an infinite regress. If the difference is intelligence, we will find ourselves in no better predicament, for, again, there would be an infinite regress. Moreover, it is incorrect to think that intelligence, whose essential illuminating character is quite different from the nature of matter, can be its effect. The cause should be at least as rich as the effect. If there is intelligence in the effect, it should be present in the cause, also. Matter would itself be then conceived as a reservoir of intelligence.

More careful physicists like Arthur Eddington and James Jeans have perforce jumped from the land of physics to that of metaphysics. Eddington comes to assert a general or universal consciousness, a universal mind-stuff as the stuff of the universe; and to Jeans the world is more like a huge mathematical mind manifesting itself, than anything else. The great genius of modern science, Albert Einstein, the discoverer of the theory of relativity, takes us, by the implication of his discovery, to a realm where our ordinary space and time are not, and our objects lose their significance and meaning in a vision integrating our experiences in an incredible manner. He was forced in his later years to accept, by feeling, the presence of a pervading intelligence which staggers human thinking and makes human speech dumb. We are in such a world, a world of mysterious truths which we cannot comprehend. Here we revert from science to philosophy.

#### THE CHANGELESS CONSCIOUSNESS

The methods of philosophy are usually certain developments of the logical methods of thinking and rationalistic processes of thought. Our faculties of understanding, thinking, feeling and willing are, however, found to be subject to certain fixed categories, such as quantity, quality, relation and mode, or, to put it concisely, space, time and cause. On a careful examination it is seen that, even as the findings of science are not ultimately reliable due to their being influenced by the changing characteristics of the senses of perception and the instruments of observation, the philosophical method, as it is usually

understood by many, is not free from certain types of subjection to outward laws. It may be that these restrictive laws are so intimately related to the constitution of the mind that it is ordinarily impossible to distinguish between the operation of these laws and the ways of thinking. But, nevertheless, it is a restriction to the fuller freedom that is necessary to make any categorical judgment of truth. For we can never see, or hear, or even think anything outside the limitations imposed on us by the presence of such fundamental categories of phenomenal experience as space, time and causation. The moment we think, we think in terms of space, quantity, extension and succession. This is an old prejudice of the mind, which it is not able to overcome. This inseparable relation that is mysteriously established between our essential modes of thought and the laws restricting them goes by the names of relativity, phenomenality, and the like. And under these circumstances, truth unchangeable cannot be known. Truth can brook no limitation of any kind, for it is established not on any other proof of knowledge or mode of perception, but in itself.

The foregoing analysis reveals the fact that our entire waking experience, being confined to the heavy operations of the categories of the understanding, or thinking, is unsuited to any genuine attempt at the discovery of truth. Our dream-experience fares no better: it is, in the structure of its activities, similar to the waking experience. Unfortunately, we know of no other conscious human experience than waking and dreaming. Thus it is that we often hear it said that truth is not given to the human mind. Profound-

der methods of philosophy, such as those adumbrated in the system of the Vedanta, take into consideration the deeper implications of the state of deep sleep, which has been very unwisely set aside by most of the Western philosophers in their analyses. We are bereft of all consciousness in the state of dreamless sleep, we cannot know even our own existence then. But that we do exist in sleep cannot be gainsaid. Our existence here seems to be asserted notwithstanding the absence of the consciousness of existence! But if you think carefully you will notice that no assertion of any kind is possible without some sort of consciousness. And yet, what is it that makes us affirm ourselves in sleep? Definitely, not direct perception. We have a memory of having slept and of our having existed prior to our falling asleep. Yesterday I was, and today I am,—thus does the individual assert itself. A phenomenon of this type discloses the fact of there being a connecting link between the state preceding sleep and the one succeeding it. The prior and the later states being involved in consciousness, we cannot, as we have already observed above, suppose that the link between them can be an unconscious principle. The link, too, has to be a conscious one. We never assert that we are ignorant beings in our essence; even a stupid man does not wish to be called so. The essence of intelligence is continuously affirmed, even unwittingly.

Further, that we have a memory of sleep shows that a kind of perception was going on even in sleep, for there can be no memory without a previous perception, and no perception can have a meaning unless it is attended with consciousness. If memory has

a meaning, the conscious perception that ought necessarily to lie antecedent to it cannot be denied. We had consciousness, and we existed as consciousness in deep sleep; but we knew it not. Some mysterious darkness was veiling us. And this veil is nothing but the inactive latency of the possibility of objective experience in terms of the phenomenal categories described above.

The Vedanta, thus, takes us beneath the surface and makes us dive into an ocean where we discover the pearl of truth, the truth that we are essentially not only conscious existences but consciousness itself. We are not beings possessing consciousness as an attribute of ourselves, for then we would be reduced to unconscious bases of a conscious attribute. This cannot be, because the knower can never be said to be an unconscious principle. The knower ought to be consciousness, not even a mere possessor of consciousness as a quality. Our existence, then, is an indescribable splendour surpassing all light and radiance known to us in this world. Saints and sages point out that words are not meant to describe the transcendent Being, for all speech, together with the mind, is in the position of an after-effect and cannot be expected to illumine its own cause and presupposition. This consciousness, which is our primal essence, cannot be conceived to be limited in any way for the very idea of the limitation of consciousness would prove that consciousness is beyond limitation. The idea of a boundary proves that there is simultaneously the idea of the existence of something outside the boundary. To set limits to consciousness would be a self-contradiction; the limitation cannot be outside

the purview of consciousness. Consciousness is infinite.

The consciousness of the continuity of our personalities through the various vicissitudes and changes of life goes to prove that it itself is changeless. The fact that it is indivisible proves that it is infinite. To know this, then, is to know truth. This alone can be the great uncontradictable experience. This *we* really *are*. In knowing this we know ourselves as we truly exist. This defies all diversity, and, consequently, all desire, attachment, hatred, anger prejudice, and the like.

#### THE UNDERLYING UNITY

In this connection it would be profitable for you if I recall to your memory an interesting system of philosophy expounded in recent times by the famous professor, Alfred North Whitehead, on the basis of the discoveries made by Einstein in his theory of relativity. It is the opinion of Whitehead, not a mere fantastic belief but a rational conviction, that things in the world do not exist as localised bodies or static substances in a three-dimensional space, but are really certain phases of force entering into one another and forming a marvellous completeness wherein everything is a cause and an effect at the same time from different points of view. In an interrelated cosmic family we cannot say which is dependent on what, for all are mutually included, and nothing is independent. There can be no being but only becoming and process in this world of relativity. The Vedanta, however, goes above the concept of White-

head and envisages the Eternal Being existing at the background of the world process. In fact, the conclusions of the theory of relativity shift the entire position of scientific thinking and even the commonplace method of popular philosophy, and brings about a reorientation in the conception of matter, motion and force. The discovery that perceptions depend on the position and velocity of the observers makes it impossible for one to state anything as an invariable truth about the things of the world. Curiously enough, the observers themselves would be relative to one another, and there would be none to observe even the fact of relativity! Here we rise to a tremendous intuition, above all thought, and visualise an incredible infinite which ought to be the real Observer of the whole universe of relativity. The 'ingressive evolution' of Whitehead gives a hint to a terrific unity underlying all evolutionary process. Whitehead himself does not seem to have noticed the great significance of his system,—it points to something beyond what he intended to tell us. We are lifted to the eternal, the immortal.

Let me make the matter clear to you by another observation. You are acquainted with the principle of gravitation, a law by which bodies attract one another in a particular manner. The centres of gravity should be relative, because there is attraction of everything towards everything else, under the governance of the same law. Not only material objects and masses of matter but even we as bodies are relative centres of gravity, determining one another in characteristic as well as existence. That there is an internal relationship among bodies, which is exhibi-

ted in the form of gravitation and attraction, indicates that the bodies of the universe are in some mysterious way held together by a single force—we may call it the universal centre of gravity. Unless such a centre is accepted, the system, the order and the method observed in the working of the universe cannot be explained. Mystic philosophers are used to say that this cosmic centre is everywhere, with its circumference nowhere. We may call this the God of the universe, if we so wish.

We know the world; but what about that by which we know it? How can we know the knower? The great sage, Yajnavalkya, prominent in the Brihadaranyaka Upanishad, makes a significant reference in his immortal instructions to his consort, Maitreyi, to the awe-inspiring existence of the Self which is the seer and the knower of all things, but which itself cannot be an object of anyone's knowledge. This Self is not an element among many others in the world, for it is the observer of the elements. The two different elements—beginning from two common objects up to the individual as set against the universe,—cannot be known except by a consciousness which is all-embracing. The intimacy that subsists between the knower and the known is accounted for by the objects being phases of *Vishayachaitanya*, or consciousness in a state of configuration. We understand, then, that matter is nothing but spirit discerned by the senses.

A great French philosopher once sat contemplating on the problem of human experience, on the methods of arriving at truth, and on the possibili-

ties of confronting errors at every step in this hazardous attempt. He thought: May be that I do not see clearly, nor think rightly. It may be that I am forced by some imp to think wrongly and to observe imperfectly and distortedly. It is likely that nothing that I see or know is certain or capable of being designated as an uncontradictable truth. Everything may be doubtful. I may doubt the existence of my body, of the world, or even the validity of the very processes of my thought. There is only a sea of doubt, nothing else. Well, accepting this position tentatively, can I come to the conclusion that the true state of affairs is that there is only doubt, doubt about even my own self, and nothing beyond? Though it may be a fact that I have the right to doubt or disbelieve everything, I have definitely no warrant to doubt that I doubt. The fact of doubting itself cannot be doubted. The doubter is indubitable. The doubter exists as an uncontradictable fact. I am, and this cannot be doubted.

And I know that I am finite. I have an innate feeling that I have to be perfect, that I should achieve unconditional perfection. Naturally, this means that I should be unrestricted and be wanting in nothing. In short, I wish to possess the infinite, and I can conceive of it as an idea. Now, this idea of perfection, of infinitude, has arisen in me, and this idea, being an effect, must have a cause which is at least equal to it. The idea arises from me, and therefore I am the cause of it. The idea, having relevance to the infinite, presupposes my own existence as having a similar relevancy. An idea of the infinite cannot be supposed to arise from a finite cause. I should

be essentially infinite. We may give this stupendous Being any name, it matters little. That there is an intimate relation between the essence of the subjective knower and the reality of the objective universe cannot be doubted. In fact the two are one and form a unitary being. Reality is non-dual.

For purpose of clarity in understanding, we may explain the constitution of the universe as in many respects similar to that of our own body. Our body is not an indivisible whole; it is made up of discrete organisms, called cells. Each cell is different from the other, with gap in between, and yet we have a definite feeling that we are one impartite personality. The consciousness that is immanent in us as a single being is responsible for this feeling. Such a feeling expanded to the cosmos would be the feeling of God. This God-consciousness stands opposed to the individual body-consciousness in that the latter has an object to be known outside it, while the former is an integral fullness, a plenum outside which nothing can be. In the assertion of the cosmic I, everything existent or conceivable is included.

A great hymn of the Rig-Veda, called the Purusha-Sukta, or the Hymn of the Cosmic Man, visualises in a grand poetic image the Supreme Being as endowed with thousands of limbs, thousands of heads, eyes, feet, and so on. All that was, is and shall be is said to be comprehended within this Almighty Purusha. The idea behind this majestic vision is that the universe is one body, and even as the different limbs of our body are integrated in our personal and individual consciousness, the different limbs of the

universe,—including our own bodies,—are integrated as sublimated essences in the Almighty, whom we call God, Isvara, the Essence, the Substance, the Reality, etc. A correct understanding of the significance of this concept of truth will at once reveal to us our position in the universe, our relation to others, and our supreme duty in life. What can be a higher duty and a responsibility than to strain every nerve of ours in attaining this consummation of our existence in the Absolute! Where can be a goal other than this for us to achieve in the different walks of our life? Viewed in this way,—and there can be no other way worth the name,—the foremost duty of the human being is anything that is directly or indirectly connected with the realisation of this highest end. We live for this, we move towards this, and we have our being in this. When we know this, and this feeling enters deeply into our hearts, we live the true life, and we are blessed.

## THE PSYCHOLOGY OF THE INNER MAN

### RELATIVITY OF PERCEPTION

We noticed that our essential Self is the highest reality. Even doubt and denial of it really affirm it. In our ordinary external life we are prone to believe that our eyes are the seers of objects. This is the uncritical opinion of the common man. But it is not difficult to perceive that the eyes by themselves have not the power to know things independently. The matter comes into high relief in the states of dream and deep sleep, when, even if the eyes be kept open, nothing external can be seen or observed. No sense-organ seems to function in these states. The

ears, even if they are kept open, cannot hear sounds. If we place a few particles of sugar on the tongue of a sleeping man, he will produce no reaction and have no taste of it. The very existence of a body is then, for all practical purposes, negatived. The reason, as you will immediately understand it, is that the mind in these two states is withdrawn from the body and maintains no contact with the senses of knowledge. When the mind pervades and activates the senses, they seem to work as intelligent agents of knowledge. But when they are deprived of relation with the mind, they lose all their value. The mind is the real perceiver, and to it even the sense organs, such as the eyes, stand in the position of objects.

But deeper analysis has shown us that even the mind has an objective character, inasmuch as it is seen to be deprived of all life in the states of swoon and deep sleep. It is intelligent when it is awake but non-intelligent when it is made to wind up and adjourn its activities. A consciousness higher than the mind enlivens it and gives it meaning. The mind is a psychological organ, not a metaphysical principle. It is on account of the relative activities of the mind that we have a diversity of experience in the world. It is the mind that creates a gulf between the objects and our reactions to them, between existence and value. This distinction is made not only in respect of the things of the outside world but also the different aspects of our own personality, viz., the physical body made up of the five gross elements,—earth, water, fire, air and ether—; the vital body consisting of the vital forces and the organs

and not to be taken as ends in themselves or mistaken for reality as such.

Not only the body and the senses but even the self conceived as a limited individual centre of consciousness is a process of intense activity, moving, changing and evolving incessantly. The individual self is the basis of knowledge as well as action. Due to confinement to a spatial existence the individual self is dominated over and harassed by certain urges, felt within itself, pointing to certain external objects and states. The desire for food, clothing and shelter, for name, fame, power, sleep and sex, often appears in the human individual as a violent force which cannot be easily subdued or even intelligently controlled. These deep-rooted urges are an immediate consequence of the self's restriction to a dualistic perception of the world and an arrogation of ultimate selfhood to itself, while the truth is otherwise. The individual has a morbid habit of unconsciously asserting itself as the centre of experience and considering the other contents of the universe as adjectives or subsidiary elements meant to bring satisfaction to it in some way or the other. In this respect, we should say that all forms of human knowledge are different types of activity to achieve certain ends other than themselves. Man never is, he is always to be. This predicament is, as it would be clear, a corollary of the feeling that we are localised entities forming a mechanical whole, which we call the universe, of which it seems that we can never have a simultaneous knowledge. Our perceptions are always in a series, we know things one after another, and not at one stroke. We never see one and the

same picture at two given moments in a cinematographic projection, but yet we seem to see a continuity of the existence of forms on account of a very quick succession and motion of the pictures. Strictly speaking, we never see one and the same thing in a particular act of perception, but the rapidity of the psychoses is so tremendous that there is an illusion of the perception of a static existence. And above all, there is that absolute Self behind all mental functions, from which these draw sustenance, and borrow existence as well as light.

#### METAPHYSICS OF THOUGHT AND ITS FUNCTIONS

Every action, viewed in this light, becomes a symptom of the restlessness of the relative consciousness in any of the human sheaths in which it is enclosed. There is an unceasing attempt on its part to break boundaries, to overcome all limitations and to transcend itself at every step. The environment called life in which it finds itself is only an opportunity provided to it to seek and find what it wishes to have in order to exceed itself in experience in the different stages of evolution. The universe is a vast field of psychological experience of multitudinous centres of individuality for working out their deserts by way of objective experience. The universe is another name for experience by a cosmic mind, of which the relative minds are refractive aspects and parts. The desirable and the undesirable in life are nothing but certain consequences which logically follow the whimsical and unmethodical desires of the ignorant individuals who know not their own ultimate destination. What is desirable today need not be so tomorrow,

and today's painful experience may be a blessing for the future. It does not mean that all that we want is always the good. We often grope in darkness and find a cup of poison which we avidly drink, while we are really in search of some soothing food to appease our hunger. There is no error in the world or the objects; it is in the painful fact that we have no knowledge of what is really good for us. It is not enough if a physician knows merely that a particular drug has the power to suppress a particular ailment, he has also to know what other reactions the drug will produce in the living organism. In our life, the mind has to act as its own physician, and in this work it has to exercise great vigilance born of right perception. No thought, feeling or willing can be said to be healthy when it is not in consonance with the health and peace of the universe as a whole. That we are members of a single undivided family demands that we have to be mutually co-operative, and think and act in terms of mutual welfare, which, in the end, is the welfare of the whole. When this knowledge is not given to the mind, it acts blindly and errs with the idea that what appears to bring a temporary sensation of pleasure to it is the true and the good. When it does not learn the lesson of life by enlightened reason, it has to learn it by pain.

The mind, in the Vedanta philosophy, is conceived not as any independent entity opposed to matter, as is the case in several systems of Western philosophy, but is understood to be an aspect of the material principle itself appearing in a more rarefied form. The psychology of the Vedanta is a highly scientific methodology evolved out of the fundamental concept

that the supreme reality is Absolute Consciousness and anything that may seem to be opposed to it can only be a phase of itself. The fivefold base of objective perception, viz., sound, touch, form, taste and smell, is found to be inseparable from and reciprocally related to the senses of knowledge working under the direction of the mind. The theory of the Vedanta is that the mind, constituting mainly the functions of understanding, thinking, feeling, remembering and willing, is the resultant of the collective totality of the purified forms of the essences of the five substrata of sensations enumerated above. The sympathy that is observed between sensations and their objects is thus explained by the fact that the causes of the appearances of the two are essentially the same. Not only this. There is the presupposition of the greater truth that at the background of the mind, the senses and their objects, there is the Absolute itself as their very reality. The Vedanta psychology is a direct consequence of its basic metaphysics which lays down that existence is non-dual. It is on this foundation of the ultimate inseparability of the knower and the known that we have to envisage the law governing the universe and regulating individual and social life.

The highest law is accordingly conceived as Dharma based on Rita and Satya. Rita and Satya are two terms that occur originally in the Vedas, signifying the eternal cosmic order and the same as manifest in the diversified world. Dharma is nothing but one's duty as an individual stationed in the cosmos, as its integral part. This at once explains by implication one's duty towards family, society, the

nation and the world at large. The fulfilment of this Dharma is expected to be achieved not in a slipshod way or by leaps and bounds, but in a gradual manner following closely the evolutionary process of the cosmos. Material welfare, the enjoyment of desires and relations to society are given due consideration and are equally regulated by Dharma which, at the same time, works with Moksha or the ultimate realisation of the infinite as its aim. Dharma is the ethical value, Artha the material and the economic value, Kama the vital value and Moksha the infinite value of life. As the infinite includes all the finites, the aspiration for Moksha naturally implies the fulfilment of the ends of all other desires and the execution of all other duties in life. This sublime aspiration arises in the mind when it has an inherent feeling of 'enough' with the things of the world. This is the 'divine discontent' which acts as a forerunner of the struggle of the spirit to grasp and know itself in the Absolute. It is here that true knowledge dawns.

Ordinary psychological experience is usually marked off from a life of spiritual insight. The path of the pleasant is differentiated from the way of the good. What the senses report to us need not necessarily be the true or the good. Often they give us false intimations and involve us in tantalising mirages which recede from us as we try to approach them. It is because of this unfortunate predicament that we go on experimenting with one object after another, seeking final satisfaction, but do not find it anywhere. This fruitless pursuit continues until thinking of benefit in terms of separateness discovers its own futility and gives way to a search for peace

in terms of more and more integrated realms of being. The individual expands to the family, the family to the community, the community to a wider society or the nation, the nation to the whole world, and the world to the cosmos, wherein the process of expansion finds its limit and begins to turn inward into the centre of experience which, in the end, is recognised to be identical with the Supreme Being. Bearing this in mind, the sage of the Upanishad warns us with a great rule of life that everything shall desert us if we consider it to be different from our own essential self. As we have already noticed, nothing in this world can be considered to be merely a means to the satisfaction of another, for in this mutually-determined whole there are only ends, not means. The Bhagavad-Gita states that all pleasures that are born of the contact of the mind and the senses with the external are wombs of pain, for outward contact is not the way of contacting reality. The dissatisfying consequence of sense-gratifications, the fear that usually attends upon them, the chances of getting addicted to the habits and impressions produced by such pleasures, and the inevitability of the rise of further desires and greater distractions, in addition to the wearing out of the senses, should rouse in the man of discrimination a consciousness of the higher life.

#### SECRET OF RIGHT ACTION

No action is seen to fully bring to us the intended result, because it is bound up with several factors not under the control of the actor. It is meaningless to think that a divine way of living is not

the usual way and that it is some mystic segregation and introversion not normally connected with life. This misconception arises on account of a misunderstanding of what spiritual life is and the aim of life should mean to us. When every type of action is visualised as a process of the universal activity of God, or the Absolute, individual and personal agency drops out from the scene altogether. Behold the soul-stirring dictum of the Bhagavad-Gita, that the wise one should always maintain the feeling that the agent, the process and the result of action are only modes in the universal design. Here becomes explicit the truth of the saying that we are to regard ourselves as only instruments and not the real doers of any action. This is Karma-Yoga, that master technique of converting every work into duty and a veritable self-sacrifice, self-dedication and self-consecration in the beatitude of God. And Karma-Yoga is said to be based on Buddhi-Yoga or the art of right understanding, the understanding that man is ever in a state of attunement with God. Even the springs of instinctive action are found ultimately to be rooted in a distortion of the desire for self-possession in the completeness of the Divine. Only, instinctive action suffers and labours under the ignorance that the body and the mind have an existence isolated from other bodies and minds. This misery is Samsara, the aberration of the soul from itself, and the searching for itself in the not-self, the phantom and the imagination.

The reason why we think and feel as we do or act as we are accustomed to, lies in the why and how of individual existence itself. The body and the mind

receive a universal sustenance, they are not only maintained but even constituted by an ocean of force which appears to manifest itself in spatio-temporal configurations. Our central urge is to overcome spatial limitations and temporal restrictions in an experience which is self-dependent, self-determined and perfect in itself. This state is referred to in the Upanishad as the Plenum of Felicity, where one sees nothing else, hears nothing else and understands nothing else. It is also said that that should be considered transient and insubstantial in which one sees something else, hears something else and understands something else than the Self. Under these circumstances it would be mere vanity and a futile attempt to try to arrogate reality to any personality or individuality. This self-arrogation is termed selfishness, and is a folly.

In this mysterious cosmos, which is more like a reverberating chamber where every little sound is loudly heard everywhere and in which there can be no such thing as privacy, every thought, however feeble it may be, announces itself spontaneously and gets recorded in the subtle realms, never gets destroyed, and is repaid in a befitting manner. Every thought is a tiny ripple, a wave in the sea of existence, and has a claim to exist and be evaluated as any other thing existent or conceivable. Everyone of us, therefore, has at his background infinite support, infinite help, infinite sympathy, if only we would be careful enough to invoke it, by being aware of it. The unity of religions, the concord of philosophical thought, the meaning of universal brotherhood and the necessity for universal love in life is here explained.

which is also without, at the same time. Yoga is an art insofar as any successful practice of it demands of us a sort of genius and uncommon insight which cannot be expressed in mathematical or logical terms. But Yoga is also a science in the sense that it follows certain fixed laws and its principles are eternal, irrespective of class, creed, place and time. It is the knitting together, as it were, of the various springs of thought and action to form a connected and beautiful fabric in the universal scheme. It is a, that area of peace, of inner delight, and it runs parallel to the outside and the same moment was resultation of the lower only with the difference of every step that we with the various, the precondition of the next step. man who has only in is a means which, when it evolves one who is not, is already present at every stage of the structure of, takes the shape of the end, and and in self, already present at every stage of the that on in ing process of the means. The world is thus te said logical and not mechanical. We, individuals inhabiting this universe, are held together not as pebbles or stones forming a heap but as organic parts which are inseparably related to a living whole that cannot be cut or divided without being mutilated and destroyed. Our social relations, which have a deeper meaning than is seen on the surface, should apprise us of the existence of a universal Self, and of our duty to it in all the strata of life. In our perceptions we perceive it, in our feelings we feel it, and in our actions we stumble upon it every moment, though we, at the present state of ours, are not endowed with an adequate knowledge of it. Human psychology is a study of the mental behaviour of the human individuality, and this individuality is, as we have observed above, a conglomeration of certain involun-

filment. Our joys and sufferings, our exhilarations and griefs, our prejudices and ideals are not to be valued as realities in themselves but as certain conditions which we have to overstep, and which will mean nothing to us when transcended in a deeper wisdom. Our present life is a flow of events, and nothing that changes can be called the real.

### IS SACRIFICE AND DEDICATION IN LIFE

why we need a correct spirit to high relief the significance stood in the presence of self-sacrifice to perform actions not the requisite apparatus all things because the fruits the human personality, it being as determined by the phenomena that are presented to evade the present often merely plays second fiddle to their understanding. Reason should also be able to know man in all ways, tions, and also the reason why it should be so and why. Our present-day psychological analyses cannot but be the last word in the field of inner research, for it is have other means of knowledge than mere sensation. The mind, when it is disturbed by the revolting noise of the senses, cannot properly reflect in itself the true state of affairs. When the five senses of knowledge stand fixed together with the understanding and the faculty of thinking, and the intellect does not oscillate, that, they say, is the supreme state, declares the Kathopanishad. That, again, is called the condition of Yoga wherein the consciousness does not get objectified through the avenues of the senses, and the mind rests in itself. Yoga is at-one-ment with the Infinite. No science of the mind or study of the inner behaviour of the human being can be exact and meaningful when this mighty truth is lost sight of, and the endeavours at right know-

you would say I am. But we do not stoop to think here that the table itself is supported by the floor. And where is the support for the floor? It is perhaps kept fixed by certain beams placed crosswise beneath it, which again are supported by walls, the walls being supported by the foundation, and the foundation by the earth. Is the position of the earth self-dependent? No. The earth's position and motion are governed by the attraction of other planets in relation to itself, and we should not be misled by that the planets are held in position by the gravitational force of the sun. The modifications of the system is said to be able to have clear perception to another destination. Patanjali points out that the Way. Where only when we cease from thinking on the tab'of forms of the mental modification we should adopt quite a different way of perception. In other words, we have to rest in our own existence, first, in order that we may be healthy and so have a healthy perception of things. All types of objective thinking are considered in our system of Yoga as certain diseased conditions of consciousness, for in these states the consciousness is not-in-itself. Whenever it is not in a state of rest in itself it gets identified with the forms of the mind, and assumes for the time being their spatio-temporal shapes. In this empirical process the individual consciousness often comes in conflict with other such centres in the forms of other persons who have their own special modes of self-identification with other types of mental transformations. Human misery has its roots in this self-contradiction born of ignorance of the structure of the perceptible diversity and its basis in the One.

off scot-free? Every action has a reaction which comes with an equal force of nemesis and retribution, for every action is a sort of disturbance produced in the equilibrium of the universe, and the universe shall ever maintain its balance by rebutting the force of disturbance created in its being in the form of an action of thought. How marvellous is life, how grand, how just, and yet how relentless!

harmonic correct spirit with which we have to work removes within one of self-sacrifice and surrender and brings about a ~~sub~~ <sup>sub</sup> all things. As a famous work in consonance with the ~~as~~ <sup>as</sup> this vast world, in view. This is the case with ~~evaded~~ <sup>evaded</sup> inside and whether architecture and sculpture. <sup>Another</sup> drawing, or music and literature. The permanent Di-art is the arrangement of material to ~~pl~~ <sup>pl</sup> and the thm, symmetry, order, fullness, and a sense of but fection so far as the mind can conceive of it. <sup>is</sup> have to arrange the pattern of life, with its force of the outward Nature and inward impulses, so that there may not be any jarring element or inharmonious appearance unsuited to the purpose of realising the equilibrium of the universe as reflected in our personal lives, in the life of society, the community, the nation and the world. We do not belong merely to ourselves, not even merely to any particular society or country, but we are citizens of the universe to which we owe a tremendous duty. And this duty is nothing but feeling and acting in a way that may not negative or violate the truth that the essence of the universe is an indivisible fullness. This art of self-adjustment with the entire creation is called Yoga. It is an art that appeals to the being within,

with this consciousness,—with the deep feeling that he is an instrument in the hands of the Absolute, that his actions are really not his but Its, and that suffering is inevitable the moment he cuts his consciousness off from the Divine. The happy and the normal life is, therefore, the Divine Life.

### INNER DISCIPLINE

This is a grand concept, and this the science that there are certain lesser aspects in our daily life which cannot ignore if we are to be really happy. It is a science of the result that at one rent endeavours for the result of being at peace not use our emotions in a way that the levels of our being but also a way that the strata of external life. A happy harmonious person is able to lead a successful life is attempt to be thoroughly friendly not only with the than his demands of his own body, mind, emotions, judgment but also with the different elements and go to form the world outside. The Yoga system, by its technical terms, Asana, Pranayama, Pratyahara, Dharana, Dhyana and Samadhi, expresses in a highly mystic way the need for perfect discipline of the body, the vital forces, the senses of perception, the functions of the mind, the intellect and the reason from the standpoint of the universe taken as a whole. Life is a preparation for self-realisation, a training ground for the individual to transfigure itself in a self-dedication to the Absolute Reality. Some have compared this earthly life to a temporary halting of pilgrims in an inn, which is not the destination but only a means of help in the journey. We are not to take the experiences of this life as ends in themselves but as processes of self-advancement and chastening of the inner spirit for a higher ful-

extent you know why you are what you are, and how much you endeavour to improve yourselves in the right direction. Of course, do not be in a hurry. *Understand well* before you take a step. There cannot be a right attempt without a clear-cut ideal before it, and directing it. A race horse put to a plough or a plough horse put to race will not lead to any substantial result. We have to know our powers, our ~~ledge~~, and go only so far; not further.

Herein comes a ~~tionally~~ healthy, you will find of the teaching that ~~without~~ with yourselves, and without regard for their fruit. A crowd, or even of are not in our hands, they are a doubt, this is only ultimate law of the universe, which, the most well-condition of our minds, we can neither perfectly nor follow. Our duty is to act, act in the ~~right~~, and bearing in mind that we are fulfilling an inviolable and unavoidable imperative, not forced upon us by an outward mandate, but by the law of our own being, to ignore which would be nothing short of folly. To work with any fixed ulterior motive beforehand would be like naming a child before it is born. The position is that no one can clearly envisage or understand the nature of an effect which would follow a particular action. That we glibly talk of fixed results of visible causes and hope for desired ends of our actions only shows that we have a very narrow outlook and forget the fact that nothing in this interrelated universe is absolutely self-dependent but requires the co-operation of infinite centres of force for it to come into being at all. Just take a concrete example. I say that a book placed on a table has the table as its support. Am I right? Perhaps

instinctive urges, which, again, is due to ignorance of one's hidden capacities and of the way by which to utilize properly the facilities provided under the conditions in which one is placed. You have to know clearly (1) what ought to be done, (2) what is capable of being done, (3) what has been done already, (4) why something has not been done yet, and (5) how to overcome the obstacles in a reasonable manner. This means that you have to be master of your own psychology. A successful life includes the integration of being in, as well as outwardly. The whole solar system is rushing with a great velocity in the vast ocean of the Milky Way. We, and where is the book placed latent within. The existence of things is really marvellous. And, surely, our life is precarious. What have we, then, under these circumstances, to do? We have to see what we have in our minds? We can be justified in hoping only for that thing which is sanctioned by the unitary law of the universe taken as a single whole.

The Bhagavad-Gita, for example, exhorts us not to have attachment to things. Obviously, any outward attachment is not permissible in the scheme of things as they truly are. To which object am I to be attached, when everything outside me is inseparably related to me, and we are all mutually inclusive and determined in this magnificent home of God's creation? Where is that special endowment of reason, of which man so much boasts, when he acts as an animal in thinking that he can have special attitudes to particular objects and yet hope to be let

look at the world with a cosmic vision, and to act at all times with this consciousness, is the requisite qualification demanded of a truly cultured person and a seeker of Truth. We are neither wise nor right when we lose sight of this meaning of the educational process and act in a way that is not warranted by this vision of perfection. But success is near at hand, if only we would have a rightly directed will.

Then for our own good. Let us pray in the sub-  
in this work the Upanishad:  
to the Supreme Cause.  
verse has it, whatever there  
visible or heard of,—all this is <sup>the</sup> Real,  
outside, throughout, by the Eternal  
verse tells us that we have to see the  
vine in earth and water, in the mountain  
flame of fire, and that the whole world is none  
the appearance of God.† The correct perception  
designated as Ishvaradrishhti, the practice of the pre-  
sence of God in each and everything, in every quar-  
ter and cranny, everywhere, and at all times. The  
essence of the Gita teaching is this, that the uni-  
verse is the body of God, nay, it is God Himself  
appearing to us through our senses, the mind and  
the intellect, that there is nothing outside of God  
ever existent, that man is bound to have prosperity,  
victory, happiness and lawful polity when he acts

have to be master of which we  
successful life is successful in our differ-  
First, we have to  
and properly and adjust them in such  
do not create any discord in life's  
process. Second, we have always to  
make a fuller use of our personalities  
actually do in states of misconception, pre-  
e and ignorance. There has to be brought about  
complete reorientation of our ways of thinking,  
in the light of eternal facts amidst which we exist.  
There is that absolute necessity to bring about in  
ourselves those necessary changes, now and then, to  
attune ourselves to the vast universal environment.  
Think properly about yourselves, and understand  
your position in the expanse of the environment  
around you,—whether it is family, the community, the  
country, or the world. Face your weaknesses with  
an adamant will, but know also your strengths,  
and use them to adapt yourselves to the circumstan-  
ces in which you find yourselves at any given mo-  
ment of time. In this you have to be very diligent,  
sincere and honest. Remember, always, that what is  
important is not so much what you are, as to what

## APPENDIX I

### PATH TO PERFECTION

If you are perfect, perfection begins with the conviction that you will be comfortable in the immediate reality that is around you. You would not need the company of other persons related to you. No one is definitely known to you on one aspect of the question, because a person whose consciousness is adjusted should be comfortable in any maintenance at ease either way. Watch yourselves in a vision of the self to detect what you are. You can know your weakness when you are thwarted, opposed, threatened or when you find yourselves in danger. You can also know your buried desires and urges, your cravings and fears, when you are put to such a test. The training of the emotions and the development of strength within, however, is not difficult for one who has a genuine conviction that he is backed up at all times by a mighty Power that works everywhere in the cosmos, and that he has nothing to fear. This faith should be born of conviction, enlightened understanding, and a real love for the Supreme Being. This is self-mastery, by which one can invoke incredible powers to function at any time in one's life.

Do not have inner conflicts. Such conflicts are mostly results of the inability to fulfil the basic ins-

means the irrhythmic distribution of the vital energy and the disturbance of the nerves. This leads to the illness of the body. A good aspiration towards a non-selfish end is the prerequisite of a good programme of life. The early stages of one's life should be spent in the pursuit of knowledge, service of the teacher, self-control and austerity. At this stage one should not concern oneself with the duty and the business of the world, which are likely to draw one's attention away from the primary duties which one is expected to fulfil at this time. The moral law which includes the law of truthfulness, love and continence should be the guiding factor in the expression of oneself. One should be physical, Contentment, joy and devotion should be the basis of one's life. About the health of the body one should be concerned in degrees, inwardly as about the health of the mind. One should know oneself as higher than the ideal of life should be. One should use the reserve forces which lie within and use them for the constructive work. The structure of life which is not merely for oneself, but for everyone, equally. When the diversity of things is beheld as rooted in the One, and as having proceeded from the One, then does one attain to perfection, says the Bhagavad-Gita. But the achievement of this end is hard, though possible for everyone. It demands inner toughness born of a perfect moral nature. A capacity to love and to serve all with the feeling of the presence of a common element behind everyone, to be truthful and honest and straightforward at any cost, to be able to feel for others as one does for oneself, not to do to others what would not be desirable for oneself, to have always a concern for the good of the whole world and not merely of a restricted group of persons, not to attempt at appropriating things which do not lawfully belong to oneself, to be perfectly continent and restrained in thought, word and deed, to be able to

perience and knowledge of truth. Understanding, willing and feeling are the three faculties in man which have to be taken as the means to the practice of the method of approach to the truth. Some make use of all these faculties in a certain proportion in their march to perfection. Others take to an exclusive method which transforms the other methods into itself, or retain them as subservient elements.

And the method of feeling is faith. Faith in God is the stan-  
lime words of reaching perfection. Love of God and  
manifestation as the universe is

Lead us from the unreal <sup>dis</sup> question and reason, but  
Lead us from darkness to Light <sup>and</sup> the scriptures in

ed

a behaviour which is contrary to the fullness of God, the mind should be checked and its modifications completely transformed in a higher Being. Contrary modifications are opposed with their contradictories or replaced by others of a more beneficial nature, or the modifications of the mind are fixed on God and given a transcendental touch of the philosopher-stone of the infinitude of experience. Matter is separated from Spirit through contemplation on the essential distinction between the two and on the independent absoluteness of the Spirit. The power of the Spirit is that it either completely excludes matter or transforms it into the consciousness of perfection.

The  
inve-

The objects of the universe are the phases of Consciousness. The existence of an individual is on the same level of reality as that of the other individuals. The subject and the object are related to each other as complements, and one is not superior or inferior to the other in the degree of the manifestation of Reality. Contemplation should therefore take the form of an assertion of the conscious Reality of the universe as a whole. Here the universe ceases to be a material phenomenon but discloses its true nature of consciousness.

The attempt to transcend the known sink into a Reality larger than consciousness and application. The individual becomes the spectator, floating on in the cosmos, and presented to the senses. That which in meditation is to attune be existent in the normal human state of consciousness.

the body situated in a world of plurality. of the body in harmony and of the proper relation of the body with the external world is the first empirical concern of man. It should be the duty of a seeker of perfection to be careful to see that the body is not out of its balance in any way, at any time. The health of the body is of great importance in one's endeavour to utilise one's power in the quest of truth. External purity and observance of the laws of hygiene are not to be neglected if the body is to be maintained as one's friend and helper. *Saucha* is the basic rule of sound health. This must include the system of partaking of diet of a suitable quality, in a suitable quantity, at a suitable place and suitable time. Mental health and physical health are, generally, interdependent.

The practice of the moral law and ethical conduct will pave the way to the maintenance of a sound mind in a sound body. Passions and disturbing emotions disbalance the system and ruin the health of a person. A mental disturbance

the means; the means is a relative representation of the end. The characteristics of the end are reflected in those of the means, and by this standard one can judge the genuineness and correctness of the means. The end is the consummation of the process or the means, and the means is an indication of the characteristics of the end. The Infinite is reflected in every individual, and hence no action on the part of the individual can afford to be completely isolated from the universal processes going on within the Infinite. The way to perfection is the recognition, by degrees, of the Infinite. The will is such that the Infinite in every moment of the individual consciousness all of the universe. The will does not create the Infinite or absorb them into the Infinite. Thus the will is a way

The method of the understanding is the rational method of investigation of experience. Here the understanding and the will become one and the will becomes another name for the movement of the force of the understanding. The experience of one's finitude implies the existence of the Infinite. The nature of the Infinite is opposed to that of the individual. God is accepted not merely because the scriptures have made mention of Him or because the teachers believe in Him, but because one's own experience and understanding become self-contradictory in their expressions when the Intelligent Infinite is not accepted, and also because the infinite consciousness comes to be the logical deduction of the inmost experience of the finite individual. The longing for the infinite and the perfect is ingrained in the deepest recesses of everyone. The sense of the presence of the Infinite becomes the indicator of and the guide to the achievement of perfection.

Contemplation on the idea of the Infinite is the way.

## APPENDIX II

### EDUCATIONAL PROCESS IN INDIA

The knowledge of what they reveal at present is of the gradual and systematic cimen of what is systematically dis- human being to the reality the one purpose of contemplation and perfection is unclear the individual's processes to the cosmic mind of the public,

This attainment does not consist in any an concerned body, but in an attitude of the mind. It is the intense psy- mation in consciousness of the supreme validity of the possibility of the truth of the universe. This conscious affirmation of absoluteness should be continued until its actual realisation. The practice should be continuous and should be attended with an intense devotion to the ideal, based on clear perception and understanding. The prolonged meditation on the Absolute, in this way, leads to perfection.

The necessary implications of the processes of meditation described above are absence of hatred, cultivation of universal love, freedom from attachment, peace of mind, self-control, turning away from desires, fortitude and a deep sense of service,—all based on correct understanding and introspection. The nature of the way is determined by the nature of the destination to be reached. The end very much influences the nature of the means. The end is the evolution of

of society at the stage of the student, when the mind is flexible and amenable to the educational process. Here we have to start from the standpoint of the *taught* and not merely of the *teacher*. Education is not a process of merely emptying out the mind of the teacher by pouring its knowledge into the minds of students, but a feeling of their needs and supplying them with the proper thing, at the proper time, in the proper manner. A teacher, thus, has to be a good psychologist and should not regard teaching as a kind of business with the students. The teacher should have the capacity to make himself liked by the mind which needs teaching. This pleasant process of the imparting of knowledge is education.

In these days, neither the students nor the teachers are happy with the educational process, because it has been forgotten by the authorities concerned in the department that education has to be physical, intellectual, emotional, moral, active and spiritual, all at once, in a way beautifully fitted to the conditions in which one is placed. The technique of education should take into consideration the average of the intelligence-quotient, health, social conditions, etc. of the students. It should also concentrate itself on methods for bringing about and effecting (1) the development of personality, (2) an adequate knowledge of the world, (3) an adjustment of self with society, and (4) a realisation of the permanent values of life.

By development of personality what is meant is the wholesome building up of the individual, not only with reference to the internal states of body, mind and intellect, but also in relation to the external world reaching upto the individual through the different levels of society. In this sense,

true education is both a *diving inward* and a *spreading outward*. Knowledge of the world is not merely a collection of facts or gathering information regarding the contents of the physical world but forms a kind of insight into its inner workings as well, at least in so far as one's inner and outer life is inextricably wound up with them. With this knowledge it becomes easy for one to discover the art of adjusting oneself with society. This adjustment is not possible in any appreciable degree for one who has not acquired some amount of knowledge of the spiritual implications of the structure of human society. The aim of the education of the individual in society is the realisation of life's values,—personal, social, civic and even universal,—all mutually related and determined by a common goal to which these are directed.

Above all, we cannot start teaching students without our understanding the purpose of education. Many a Hindu, for example, has allowed himself or herself to be proselytised for different reasons. One such reason consists in the prospects of economic upliftment and raising of social status which the converters promise to these poor souls who have been unfortunately relegated to the unwanted section of Hindu society, by somehow depriving them of the facilities to improve themselves economically. The second reason is the baneful practice of untouchability and pollution by touch, which certain orthodox groups cultivated for a long time and which has not completely died out even today. Now the question arises: Why should have these things happened? Why should there be suppression and untouchability etc. in human circles? The answer is: lack of *proper education*.

But what is proper education? Bearing in mind the essentials of the process enumerated above, it should be added

that though education should be an immensely practicable affair, we should not think that the practicability of a thing consists in what is called 'succeeding' in life in any political sense of the term, because one may manoeuvre to succeed for some time, as one does in business, for instance, but be extremely unhappy within, in spite of the so-called 'practical' success. This happens because here we have only a soulless practicality of affairs, bereft of the sap of life which sustains it. Though, when we occupy a house, we are not always conscious of its foundation, nor is the foundation visible to the eyes, it goes without saying that the whole edifice stands on the foundation. Likewise, human success in life may look beautiful like a decorated and furnished building, but it cannot stand if it is not firmly fixed on a strong base. Our purpose here would be to have some idea as to what could this foundation of life's education be.

Education is for living life and not to suffer it. It is a wrong concept of the basis of life that has led to the defective structure of the present educational system. It is not necessary that religion in the orthodox sense or *Dharma* as the conservatives understand it should be proclaimed in the schools. The right type of education should have a very broad outlook and exceed the limits of parochial religions or the cult of any class of society and should be free from the prejudices of caste, creed and colour. The present-day system of education is thoroughly unsatisfactory, for, while it rejects all religion in the name of secularism, it rejects also the essentials of human aspiration and makes education a dead mechanism which has to be operated by a living being from outside. Education is not a machine to be driven by an external impulse but constitutes a vital process which has life in it and grows of its own accord when soul is poured into it. The bread-earning education has to become a life-

earning education, for the latter, in addition to supplying bread, shall also supply man with a soul to live by.

The erroneous construction of the educational basis is, then, grounded on a mistaken concept of life's values. The world we live in is believed to be a solid mass of matter. Even our own bodies are seen to be parts of the physical Nature governed by mechanistic laws, which alone appears to be all that is real. It has become a commonplace today, especially in the universe of science, that life is strictly determined by the law of causality which rules over the entire scheme of the world. We are told that distinctions that are supposed to obtain between such realms of being as matter, life and mind are superficial and are accounted for by the grades of subtlety in the manifestation and spreading of particles of matter. Even the organism of the human body which appears to defy the laws of the machine of the universe as envisaged by science is explained away as only one of the many forms of the workings of the forces of matter which is the ultimate stuff of all things. It is said that even mind is only a subtle, ethereal exudation of forces of matter. The human being is reduced to a speck in the gigantic structure of the cosmos. Behaviourist psychology with its materialistic implications gives a finishing touch to this doctrine of the mechanistic view of life.

The fact that man is not merely a humble cog in the deterministic machine of a relentless world and that the essence of man is a spiritual principle, co-extensive with the Universal Spirit, was easily discovered in the course of human evolution. Those in India, educated under the scheme of Macaulay, however, continued to move along the ruts of a so-called modernism of thinking, a rationality of approach and a scientific attitude of life, so much spoken of in these

days. People began gradually to shed their spiritual legacy and started to strut proudly under the unseen yoke of a culture wedded to a secret achievement of suzerainty over them. It is this fatal tendency of thought that has to be counteracted by right means of education today.

A correct appreciation of human values is essential before introducing any suitable method of education. It is impossible to solve the problem of the educational method so long as the authorities feel satisfied that the body of man is the final word about him. The mistake seems to be not so much with the students as with those concerned with the act of teaching, for the students, under the current which flows before them, move with it from an early age. We have to observe with regret that one of the reasons why, for example, some Hindus are willing to change their religion is because they are dissatisfied with the promises of their own religion and the way in which their religion treats them. Apart from the pernicious practice of physical segregation in the form of untouchability and the intellectual assumption of superiority on the part of a few of the classes of society, a sort of false and inadequate values in religion have been responsible to a great extent in causing a schism between man and man in the country. There is the natural instinct to visualise the better in an unknown promise of the future and, like the calf which moves from one place to another in search of the distant greens which it sees with unclear eyes, one is tempted to undergo a conversion of faith. Essentially, what is needed in religion is its understanding by its followers. Often the cry 'save us from our friends', seems to have a meaning. The foolish friend is worse than a knowledgeable enemy. The *Pundits* of the Hindu religion and the scholars who do research in its fields have been both moving in blind alleys, the one clinging to rigid tradition and blind faith and

the other to an arid rationality, though untenable. It is not true that we have nothing to learn from the West, as some conservative Hindus may hold, for we have to respect the change of times and the need for a revaluation of values. Indian culture has survived due to its flexibility, when other ancient cultures have died out due to their rigidity. It is also not true that Indian religion is mere superstition, myth and fable, as some modern scientific thinkers in oriental learning seem to think. The good is to be taken from wherever it is found, for knowledge is the aim of education, and not dogmatic clinging to unsound conservatism.

It is necessary to write a small text-book on the constitution of man in the Universe in such a simple way that it could be understood even by children of a primary school. It may begin with simple questions and answers, stories and even small plays which can be enacted on the stage. The book should contain information on the structure of the human personality in relation to outer Creation in a readable and intelligible manner. It should also deal with the fundamentals of human conduct on the basis of this relation of man to Creation. Not only this; some knowledge should be provided of the aim of such conduct on the part of human beings. These things should be said without saying things like philosophy, ethics, teleology and such phrases which are the jargons of the schools of thought. No stereotyped phrases or technical terms should ever be used in such a book. In fact, these should be avoided, because now one is concerned with the primary standard of education where technicality of any kind is to be carefully set aside. The lessons may abound in apt stories and simple plays intelligible to beginners. This may form the background of a preliminary booklet on the fundamentals of life.

There should be three or four text-books in a graded series of this nature, suitable to the primary, elementary, high school and college standards of education. The books should be written in such a way that students should be able to take interest in the subjects and cherish a faith that they are going to be benefited by the study. The high school and college levels should gradually introduce advanced learning.

In the text-books for higher classes, which will outgrow the elementary teachings, stories, etc. of the early stages, the student may be introduced to the great heritage of India in the form of its deep culture. The spiritual-cum-temporal import of the hymns of the Vedas, such as the Purusha-Sukta, the Mandukya-Upanishad, the conversation between Yajna-vaalkya and Maitreyi in the Brihadaranyaka-Upanishad, the suggestiveness of the Creation theories of revelations like the Aitareya-Upanishad, the epics of the Ramayana and the Mahabharata and the basic gospel of the Bhagavadgita should find a proper place in the higher stages of education. An acquaintance of the student with the immortal heroes of India, like Rama and Krishna; sages like Nara-Narayana, Vasishtha, Vyasa, Suka, Dattatreya, Jadabharata, Vamadeva, Uddalaka, Yajnavalkya, Parasara, etc; India's great rulers like Prithu, Marutta, Ambarisha, Mandhata, Sibi, Harischandra, Dilipa, Bhagiratha, Raghu, Aja, Dasaratha, Janaka, Rama, Yayati, Bharata, Yudhishthira, Vikramaditya, Asoka and the like, is essential at a particular stage. Short life-sketches of teachers like Sankara, Ramanuja and Madhva, and saints like Gauranga, Nanak, Tukaram, Jnanesvar, Mirabai, Surdas, Tulasidas, Kabirdas, Purandaradas, etc., should be provided in suitable places. The contributions to India's cultural revival by Swami Vivekananda, Swami Ramatirtha, Swami Dayananda, Swami Sivananda, Annie Besant. Rabindranath Tagore, Aurobindo and S. Radhakrishnan should

be brought home to the minds of students, particularly in the college level. To give a broader vision of culture in general and to point out the unity underlying human aspirations, a separate section may be devoted to the lives and teachings of Buddha, Mahavira, Christ, Mohamed, the Sufi saints and the Sikh Gurus.

Teachers should, at the background of their minds, keep behind education the fourfold aim of human existence,—Righteousness in all its stages and forms (*Dharma*), economic independence (*Artha*), emotional satisfaction (*Kama*) and spiritual realisation (*Moksha*), as the principal incentive to all human activity. This view-point should be constantly maintained at the teaching level, so that the purpose of education may not be missed on the way to the achievement of tangible results. It is also necessary to remember that without some standard of self-control (*Yama-Niyama*), which has to be properly defined at any given situation, the curriculum of studies is not going to be flawless. This is a rule to be observed both by the teacher and the taught. The educational career is a holy pursuit. Its sacredness should never be profaned by indulgences of the subhuman urges. The intellectual, volitional, emotional and active sides of human nature should all receive adequate attention. No one side should be stressed at the expense of the others. Else, there is likely to be a revolt of the neglected aspects at some later stage. The relation between the inner and the outer realities, the psychical nature of man and the physical and social nature of the world, should be harmoniously maintained at every stage of teaching. Let not the teacher think that the student is an instrument that can be operated merely by external pressure. This would be a gross blunder. For the student is a living being, a human individual, with outer desires and inner aspirations not yet properly articulated.

Ignorance of this fact has led to the grievous condition of the present-day educational institutions. The individual (*Vyashiti*) and the universal (*Samashti*) are organically related and not mechanically dovetailed.

The mechanistic view of education held by Western educationists and imitated almost everywhere nowadays forgets the life-element present in the bodily structure of man and his environment. Education has concern with life, mind and intellect and the theory that these are exudations from the bodily mechanism is the erroneous knowledge imported from Western psychologists. The individual, family, community, nation and the world at large are quantitative extensions of the set-up of the individual's bodily existence, but it is to be remembered that these outer forms have their inner being hidden from the physical eye but asserting themselves perennially as a universal spirit which speaks out in various languages of mind and intellect the same message of the integral value of the entire existence. The law of action and reaction, called Karma, the laws of physics, chemistry, biology, psychology and sociology, of the moral urge and of political history, are all different affirmations of this eternal truth. Holding this in view, the ancient teachers in India instituted the order of the four classes of society (*Varnas*), to harness wisdom, power, material and labour into a single force of progressive human society. This institution had also the advantage of preventing class rivalry and competition, and substituting it with cooperation and mutual respect of values. The institution of the stages (*Asramas*) of life revealed the ultimate purpose of all existence pressing itself forward in every stage of life,—of the student, the man of the world, the mature philosopher and the one who has attained insight into universal life. The last stage is the culmination of human endeavour and its needs have to be reflected in everyone of

the preceding steps. This is India's grand vision of perfection.

The Western yoke on India has left an impact which always insists that whatever modern science says alone is right. Unfortunately, this is not true, for the field of science is sensory, on which are founded experiment and logic, and today the boasts of science are slowly getting exploded as false and vainglorious. One is told that man comes from the ape, that one's ancestors were untutored tribes, that the past history of one's land is the story of animal-men roaming wildly in jungles, that life began with fungi which grew on earth millions of years ago, and that hunger and sex exhaust the psychic urges of humanity. Contrast with this the sublime wisdom of the masters who proclaimed that the world was originally involved in the universal being of God, that life, mind and reason are evolutes which spring back to God in a gradual self-realisation, that history also records the lives of mighty sovereigns and great sages whose personalities manifested the cosmic order of justice, truth and knowledge, that our life is a faint pointer to the latent potentialities for a vaster life in eternity and infinity and that our aspirations are indicators of what we are in ourselves essentially. There is no reason why spiritual intuitions should be mere fancies and only scientific findings be correct. We are already in an age where the very foundations on which science is based are being doubted and are regarded as questionable hypotheses. Sense, reason and intuition are three stages of knowledge, the succeeding one being more inclusive and nearer to reality than the preceding.

Care has, however, to be taken in ensuring that in our enthusiasm, the relative merits of the Eastern and Western cultures are not missed but duly recognised. Neither should

a total abrogation of the foreign nor a lowering of the dignity of the indigenous culture be resorted to even by mistake. Cultures stand or fall in accordance with their ability to meet the needs of human nature in the changes of time. Physical education and instruction in the sciences is a necessity, especially in this century, and this knowledge should be imparted in the regular modern manner of educational discipline in the Institution, coupled with a touch of the personal element in teaching. This latter aspect is more important in the educational process than the way in which it is likely to be appreciated by many.

Teaching is a more difficult task than learning, for the student has mostly to imitate the teacher and do what he says, while the teacher has to take the original initiative and the trouble of understanding the mind of the student. But we should not imagine that the role of the student is one of mere submission, for the faculty of judgment is present in everyone, though it is incipient in the student. Teaching is a process in psychology and calls forth not only superhuman patience but also infinite understanding on the part of the teacher.

Apart from the curriculum of teaching in the arts and sciences, there should be provision for recreation, excursion, pleasant exercise and open-air living. Contact with Nature is as important as lessons in the classroom. A student should not, if possible, be allowed to mingle with persons who are likely to disturb the educational career. A screening away of the student from communal or political movements is essential. Hostel arrangements in the schools would help much in isolating students from undesirable contacts. A distinction may be drawn, if necessary, between residential scholars and day scholars, as it is done even now in certain Christian

colleges. Residential education would come near the system of *Gurukulavasa*, where students are not allowed to contact even their parents and relatives during the period of education. All these things may be a little difficult where poverty is rampant and facilities for living are scanty, particularly in our country. It is here that the well-to-do should come forward and help the implementation of true education. The premises and the atmosphere of the school should be clean and attractive so that the mind receives a subtle impact of an elevated mood while one is in it. The dignity of the behaviour of the teachers, the restriction of their conduct purely to educational work, and their unselfishness of motive, add much to the perfection of the course of education. As far as possible, the school should be away from cities and not in the thick of the crowd, which may have an undesirable effect on the minds of students. They must have to breathe pure air, both physically and psychologically.

It is difficult to control the emotions of the younger generation. Regimen and discipline should be mollified by adequate entertainment. Educational and cultural film shows may form a part of occasional programmes. Music and dance of an elevated nature, as also familiarity with the arts of sculpture and painting exert a good influence on the emotion and give it a mild satisfaction. It is to be seen that the emotions are not allowed to grow wild either by too much restriction or by too much enjoyment. Emotions have to be canalised towards the culture of the spirit which seeks its manifestation in the form of life in the world. A satisfactory training in noble living cannot be given in a few years alone. The basement has to be laid at the first standard of education and the work of construction should continue at least upto the Higher Secondary School level, which would ensure training for about twelve years, the minimum period fixed in the tra-

dition to *Gurukulavasa*. Charging of high fees from students may deter large sections of people from availing themselves of such benefit. Poverty is a great hindrance to progress everywhere. The richer classes should come forward and help the working of this system, for the country is not going to be freed from mental slavery and ignorance of culture by educating merely the sons and daughters of a few aristocrats in its different corners. To enable this method of education reach at least the majority, funds are obviously necessary, for the teachers have to be paid well to prevent them from falling into indifference and corruption. More important still is to find proper teachers. Much spade-work has to be done in the beginning, and adequate funds invested for the purpose. It is a question of the blending of the intellectual, economic, moral and spiritual powers. All these have to be combined into a single force, as it was done in ancient India by a loving co-operation between the sages and rulers.

Summing up, certain features may be reiterated, which go to make for success in the educational process. Firstly, the building of the school or the college should be architecturally attractive and stately, catching one's spirits and elevating them spontaneously. Unclean, slovenly and ill-maintained sheds have a depressing effect on the mind, even without one's knowing it consciously. Secondly, the premises of the institution should be perfectly clean and one should be able to breathe an air of health when one steps into it. Thirdly, the institution should be away from the atmosphere of the city and be in natural surroundings, untouched by the busy, community life and also the communal and political atmosphere of urban areas. Fourthly, the authorities should manage to enshrine an atmosphere of seriousness, solemnity and sublimity in the premises of the institution. Fifthly, there should be a neatness of conduct between teachers or profes-

sors and students and a mutual sense of affection and trust between them has to be established, so that the whole institution becomes a fraternity dedicated to a common purpose. Sixthly, there should be a comprehensive and methodical layout of the curriculum of studies in the different classes. Seventhly, suitable text-books have to be prepared embodying the subjects of the curriculum. Eighthly, as obedience to the principal of the institution is compulsory in every case, it should be seen that he sets a practical example to others by his ideal personal demeanour, impartiality of treatment and devotion to the ideal of the institution. Ninthly, it should be a rule that trainees cannot go out of the premises of the institution during the 'spread-out' of the school or college hours, without permission of the concerned authority. Tenthly, attempt should be made to run as many residential schools as possible, so that the ancient system of *Gurukulavasa* may once again be revived, and students are not allowed to contact outsiders during the whole period of their educational career. Finally, the authorities of the institution should succeed in infusing confidence in the students as to the genuineness of the interest which they have in the welfare of the latter.

All this work is a difficult aim, but it can be achieved with effort.

## AIMS AND OBJECTS OF THE DIVINE LIFE SOCIETY

### *I. To Disseminate Spiritual Knowledge*

(a) By publication of books, pamphlets and magazines dealing with ancient, oriental and occidental philosophy, religion and medicine in the modern scientific manner, and their distribution on such terms as may appear expedient to the Board of Trustees;

(b) By propagating the Name of the Lord, and by holding and arranging spiritual discourses and conferences and frequent Sankirtans or spiritual gatherings for singing and glorifying the Name of the Lord;

(c) By establishing training centres or societies for the practice of Yoga, for moral and spiritual Sadhanas and the revival of true culture, to enable aspirants to achieve regeneration through worship, devotion, wisdom, right action and higher meditation, with systematic training in Asanas, Pranayama, Dharana, Dhyana and Samadhi; and

(d) By doing all such acts and things as may be necessary and conducive to the moral, spiritual and cultural uplift of mankind in general and to the attainment of the above-mentioned objects in Bhara-tavarsha in particular;

*II. To Establish and Run Educational Institutions*

On modern lines and on right basic principles and to help deserving students by granting them refundable or non-refundable scholarships for doing research work in the various branches of existing scriptures and comparative religion, as also to train them to disseminate spiritual knowledge in the most effective manner;

*III. To Help Deserving Orphans and Destitutes*

By rendering them such assistance as the Society may deem proper, whether in any individual case or in any particular class of cases;

*IV. To Establish and Run Medical Organisations*

Or any other medical institutions and hospitals or dispensaries for the treatment of diseases and dispensing medicines and performing surgical operations etc., to the poor in particular and to the other public in general, on such terms and in such manner as may be deemed expedient by the Board of Trustees;

*V. To Take Such Other Steps from Time to Time*

As may be necessary for effecting a quick and effective moral and spiritual regeneration in the world and in Bharatavarsha in particular.

\*

\*

\*

This Society was registered as a Trust in the year 1936 and has been actively functioning since then to fulfil the above sublime aims and objects in the world.

Culture is a progressive transfiguration of nature, a creative activity of the evolving mind of man to approximate itself to perfection, so far as it is possible for it with the knowledge and energy with which it is endowed at a given level of life. The individual is neither a body merely, nor only a mind. The human individual, at least, is a composite structure, a complex of physical forces, vital urges, emotional stresses, moral aspirations and rational needs. Nothing that does not comprehend these in its compass or contribute to the training and development of these aspects can be called an integral culture. Culture is the reflection of the soul in man, and it is complete in proportion as it answers to the original, viz., internal perfection. Pure thought, decent speech, nobility of character, impartial love, truthfulness, honesty, straightforwardness, forbearance,—such virtues as these are, therefore, the natural insignia of right culture, which can be regarded as an index of self-fulfilment. Culture implies voluntary self-restraint for the attainment of a higher goal.

—*Swami Sivananda.*
